Art Unit: 3744

1. Claims 5, 6, and 11 are objected to under 37 CFR 1.75(c) as being in improper form because a multiple dependent claim cannot depend from another multiple dependent claim. See MPEP § 608.01(n). Accordingly, the claims have not been further treated on the merits.
2. Claim 1 recites the limitation "the vehicle's motor" in line 2. There is insufficient antecedent basis for this limitation in the claim.
3. Claim 4 recites the limitation "the computer" in line 1. There is insufficient antecedent basis for this limitation in the claim. Claim 4 should depend from claim 3 and not claim 1.
4. Claim 7 recites the limitation "the motor" in line 2. There is insufficient antecedent basis for this limitation in the claim.
5. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.
6. Claims 2, 3, 8, and 9 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. Each of claims 2, 3, and 9 recites "it" in line 1. The claims are considered to be indefinite because it is unclear as to what this refers to. Claim 8 is considered indefinite because it is written in two sentences instead of one.
7. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

8. Claims 1-4 and 7-10 are rejected under 35 U.S.C. 103(a) as being unpatentable over U.S. Patent No. 4,129,012 to Mairs in view of U.S. Patent No. 2,734,352 to Dolza. Mairs discloses the claimed invention of a refrigeration system having a main circuit which includes a condenser 14 and an evaporator 12, and a complementary circuit including a bypass 26 for bypassing the main circuit. However, Mairs does not disclose the control device for enabling and disabling the complementary circuit. Dolza teaches a refrigeration system having a main circuit including a condenser 50 and an evaporator 54, and a complementary circuit 62 for bypassing the main circuit. A control means 64 allows for enabling and disabling of the complementary circuit. Thus, it would be obvious to provide Mairs with a control means for the complementary circuit 26, in view of Dolza, to yield the predictable result of closing out the complementary circuit whenever needed or desired. The use of a vehicle air conditioning system with a compressor powered by the vehicle motor by a clutch is considered to be extremely well known. Thus, to modify Mairs to use the disclosed refrigeration system in a vehicle air conditioning system is considered to be an obvious expedient to one of ordinary skill in the art. The provision of a computer for controlling devices is considered to be well known, and thus to use a computer to control to manage the refrigeration device is considered to be an obvious expedient to one of ordinary skill in the art.
9. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
